Sr No.	Activity	Month March						April				- 1	May			June					July					August					September				October				November			
		Week No.	1	2	3	4	5	6	7	8	9	10	0 11	1 12	13	14	15	5 1	6 1	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	32	33	34	35	5 3	36		
1	Identification and Planning of project	Plan																																								
		Actual																																								
2	Study of ML model integration with camera module and controller board.	Plan																																								
		Actual																																								
	Creating a hardware attachment with an integrated controller board with cameras and screen for interaction.	Plan																																								
		Actual																																								
	Designing ML/DL CNN networks running on Computer Vision algorithms for detection of grocery items from live running camera feed.	Plan																																								
4		Actual																																								
5	Developing the user interaction software to accurately manage the addition or removal of items within the user's shopping cart and integrate it with the hardware.	Plan																																								
3		Actual																																								
6	Testing the final prototype	Plan																																								
		Actual
